Q1:Precedence,Associativity and the discount Bug

CODE:

```
#include <stdio.h>

int main()
{
    double price, qty, gross;
    double discount, taxable, gst;
    double total, net;
    int senior, count = 0;

    // Bill 1
    price = 100;
    qty = 10;
    senior = 1;

    gross = price * qty;
    discount = gross * 15 / 100 * senior;
    taxable = gross - discount;
    gst = taxable * 5 / 100;
    total = taxable + gst;

    net = total > 1000 ? total - 50 : total;
    count++;

    printf("Bill 1: Rs. %.2f\n", net);

    // Bill 2
```

```
price = 250;
qty = 5;
senior = 0;

gross = price * qty;
discount = gross * 15 / 100 * senior;
taxable = gross - discount;
gst = taxable * 5 / 100;
total = taxable + gst;

net = total > 1000 ? total - 50 : total;
count++;

printf("Bill 2: Rs. %.2f\n", net);

// Bill 3
price = 120;
qty = 10;
senior = 1;

gross = price * qty;
discount = gross * 15 / 100 * senior;
taxable = gross - discount;
gst = taxable * 5 / 100;
total = taxable + gst;

net = total > 1000 ? total - 50 : total;
count++;
```

```
    printf("Bill 3: Rs. %.2f\n", net);

    printf("Total Bills: %d\n", count);

    return 0;
}
```
